Harris College

Center for Neurodegenerative Disease

TCU's Center for Neurodegenerative Disease aims to improve the lives of those living with dementia and Parkinson's disease.

Neurodegenerative diseases are a leading cause of disability and death, especially in the elderly. As life expectancy rises, more people will be affected. We must improve how we diagnose, treat and care for those impacted."

Our Mission

Improve the lives of those living with dementia and Parkinson's disease through the creation of knowledge from multidisciplinary clinical and basic research, to increase our understanding of the causes, pathophysiological mechanisms and effective treatments for neurodegenerative diseases.

Harris College is dedicated to enhancing the quality of life for those living with these conditions by offering support services, advancing research and promoting awareness.

TCU TEXAS CHRISTIAN UNIVERSITY

Dementia is the most common neurodegenerative disease in the world.

13M Americans will be impacted by **2050**

Parkinson's is the fastest-growing neurological disorder globally.

2M Americans will be diagnosed by **2037**

Together, we aspire to create a world where individuals living with dementia and Parkinsonism can find comfort, support, and the opportunity to live life to the fullest.
